

HUMAN + AI TRANSFORMATION SIMULATOR

IF AI KEEPS GETTING MORE CAPABLE — WHAT HAPPENS TO ITS PEOPLE?

You are the CEO of a fictional enterprise. Don't read about the transformation — steer it. Move one slider and watch the organization evolve from tool, to coworker, to agents, to a hybrid workforce.

01 / ENTERPRISE

THE ORGANIZATION, LIVE

The three pillars stay the same. What changes is who — or what — does the work inside them. The dot matrix is the whole 10,000-strong workforce at 1 dot $\approx$ 25 people.

Revenue	\$2.00B (+0%)
New AI-native roles created	+0

02 / ADOPTION

FOUR STAGES OF ADOPTION

The active stage is set by the slider above. Move it and watch the enterprise cross each threshold.

STAGE 1

AI AS A TOOL

AI assists individuals. Productivity rises; headcount barely moves.

dev → copilot
hr → resume triage
mktg → drafts

STAGE 2

AI AS A COWORKER

AI completes whole tasks, a human approves. 8 min → 2 min.

ticket in → understand
→ check history → draft
→ human approves

STAGE 3

AI AGENTS

Human → agent → tools → systems. The human manages the work, not every step.

find → research
→ personalize → send
→ follow up → update CRM

STAGE 4

AI WORKFORCE

Managers supervise teams of agents. The org runs as a hybrid workforce.

leader
→ AI managers
→ research / outreach / ops

03 / THE REAL QUESTION

WHERE DO HUMANS GO?

Don't ask which jobs vanish — ask which tasks move. Every role splits into work AI executes and work humans own. The split below tracks the slider.

ROLE	AI EXECUTION ↔ HUMAN OWNERSHIP	SPLIT
Data entry		35% · 65%
Customer support		22% · 78%
Financial analyst		18% · 82%
Software developer		20% · 80%
Sales executive		14% · 86%
Product manager		10% · 90%
Nurse		6% · 94%
CEO		5% · 95%

04 / EVOLUTION

ROLES DON'T DISAPPEAR. THEY MOVE UP.

As tasks are automated, responsibility climbs the abstraction ladder. The developer is the clearest example.

07 / SCENARIOS

THREE FUTURES, SIDE BY SIDE

Not a single destiny — a spectrum. Which one an enterprise lands in is a choice, not a certainty.

SCENARIO A

AI-ASSISTED

Humans stay dominant; AI is a productivity tool.

- People execute, AI accelerates
- Headcount stable

- Lowest risk, slowest gain

SCENARIO B

AI-AUGMENTED

Humans and agents work as one team; AI is a digital workforce.

- People manage agents
- New oversight roles emerge
- Balanced risk and reward

SCENARIO C

AI-NATIVE

AI runs most operational work; humans move to the top of the ladder.

- Strategy, creativity, judgment
- Relationships & accountability
- Highest gain, highest stakes

08 / PERSONAL

YOUR JOB IN 2035

Pick a role. The question isn't "will it disappear" — it's "how does the work change."

Human = judgment

AI 40%

Human 60%

How your work changes: You stop typing every line and start **directing coding agents** — defining the problem, reviewing output, owning security and the product outcome. Human share becomes judgment, not execution.

THE FINAL QUESTION

IF AI CAN DO THE WORK, WHAT IS LEFT FOR HUMANS?

The parts that were never really "tasks." As execution moves to machines, humans move toward the questions machines can't answer for us.

JUDGMENT

What should we do?

PURPOSE

Why should we do it?

RELATIONSHIPS

Who should we serve?

CREATIVITY

What should we create?

RESPONSIBILITY

STRATEGY

Who is accountable?

Where should we go?

LEADERSHIP

How do humans & AI work together?

MEANING

What is worth doing at all?
